                CHAIRMAN UMBERG: All right. Why don't we
6
    go ahead and call the California High-Speed Rail
7
    Authority to order, and, Madame Secretary, if you could
8
    call the roll.
9
                MS. TOOF: Chairman Umberg.
                CHAIRMAN UMBERG: Here.
10
                MS. TOOF: Mr. Richards.
11
12
                MR. RICHARDS: Here.
13
                MS. TOOF: Ms. Schenk.
14
                MS. SCHENK: Here.
15
                MS. TOOF: Mr. Burns.
16
                MR. BURNS: Here.
17
                MS. TOOF: Mr. Rossi.
18
                MR. ROSSI: Here.
19
                MS. TOOF: Mr. Richard.
20
                MR. RICHARD: Here.
2.1
                MS. TOOF: Mr. Hartnett.
22
                MR. HARTNETT: Here.
23
                MS. TOOF: Thank you.
24
                CHAIRMAN UMBERG: Thank you. We have a
25
    quorum, and if I could ask Commissioner Rossi to lead us

CHAIRMAN UMBERG: Thank you. And the first order of business is the election this morning. So let me just make a few comments before the election and thank a few folks.

First, let me just mention how hard staff has worked under the leadership of Mr. Van Ark to really bring the project to where it is today. It's really been amazing in the course of the last twelve months, how much progress there's been. And Mr. Van Ark has been at the helm and responsible for the progress that we've made. He's garnered \$3.5 billion in federal funding over the last twelve months, so you should have negotiated the commission, Mr. Van Ark -- \$3.5 billion in federal funding. We have designated the initial construction segment. We're well on our way to beginning construction in the initial construction segment, put together a new draft business plan, which will be finalized here in the next few weeks. He has expanded the staff at the authority, which is still not quite adequate, but it is at least three times larger than it was when Mr. Van Ark arrived on scene, and

-CALIFORNIA REPORTING, LLC (415) 457-4417-

that's critical. It's absolutely critical in a project of this magnitude to make sure that we have employees who are providing oversight and transparency to the project. And he has removed all opposition and all criticism of the project. There are some folks that are shaking their heads, "no." Okay. That's on your list of things to do here, but I want to thank you and also the person who keeps the trains running on time, and that's Lisa Toof, who literally keeps the trains running on time.

2.1

So having said that, I'm going to open the floor for nominations, and let me begin by nominating Mr. Dan Richard.

In my view, Dan is the right guy at the right time at this critical moment with respect to California High-Speed Rail Authority and our project and building our system out. His experience both in the private sector and at PG&E and the public sector as being a member of the BART Board for twelve years and being a high-level official in the first Brown Administration and having the confidence in the communities in which he serves, northern California and now throughout the state, and certainly, the energy and enthusiasm that he posses.

So I think he's the perfect quy. He has hit the

ground running in just the several months he's been on the authority board, and done a great job in both communicating and also as well as harnessing our various partners and making sure that we're starting to -- we're all moving in the same direction.

2.1

So having said that, let me nominate Mr. Richard.

Is there a second?

MS. SCHENK: There is a second. And when appropriate --

CHAIRMAN UMBERG: Let me -- are there any other nominations? Everybody is looking away. Okay.

MS. SCHENK: I enthusiastically second, and also would like to say a few words, if I may, if you deem it appropriate at this time.

Well, some of us were involved at this -- with this when it was just a concept, a vision, a dream, but there are a lot of dreams out there, and it really takes a leader and a lot of hard work to transform what is a vision into reality. And we say it's both inspiration and perspiration. And it has been a lot of perspiration.

Over the years, we have been fortunate to have leadership at the various junctures and starting with the then senator Quentin Kopp, who authored the bill to create this authority and our past Chairman, Ron Deardon

Quentin, and Kirk Pringle, of course, and Tom Umberg, whose service has been truly inspirational. Not only service to our country, to each of us, with his military service, but his commitment to this, this project. And for those of you who were here during those months when Tom was in Afghanistan and still, still attended meetings via teleconference, that is commitment and dedication.

2.1

At the staff level, many more shed in his team and now Roelof and his team working with our Chairman, with Tom. And as Tom said, they're the right people for the right moment.

And so now, again, we are fortunate to have someone willing to step up and take on what is supposed to be a very part-time, maybe once or twice a month job, but it is really a full-time job. And we're quite fortunate that Dan Richards, who I've known for many, many, many years, is willing to take this on. I've seen him in any action over these past weeks and months, and I take great comfort in knowing that he will take the reigns of leadership, and I look forward to working with him to make this vision a reality. Thank you.

CHAIRMAN UMBERG: Thank you. Thank you for your kind comments.

All right. Seeing no other nominations, Madame

```
Secretary, if you'll call the roll.
1
2
                MS. TOOF: Chairman Umberg.
3
                CHAIRMAN UMBERG: Aye.
                MS. TOOF:
                            Mr. Richards.
 4
5
                MR. RICHARDS:
                                Yes.
6
                MS. TOOF: Ms. Schenk.
7
                MS. SCHENK: Yes.
                MS. TOOF:
8
                           Mr. Burns.
9
                MR. BURNS:
                            Aye.
                MS. TOOF:
10
                            Mr. Rossi.
11
                MR. ROSSI: Yes.
12
                MS. TOOF: Mr. Richard.
13
                MR. RICHARD: I'm not sure what I'm supposed
14
    to do.
            I'll pass.
15
                MS. TOOF:
                            Mr. Hartnett.
16
                MR. HARTNETT:
                                Yes.
17
                MS. TOOF:
                          Thank you
18
                MR. UMBERG:
                              Well, thank you.
                                                 So let me
19
    pass three objects over to you. First, the gavel.
20
    Secondly, as I came in, Mr. Rossi was admiring my
2.1
    anti-ballistic sunglasses, and these may come in very
22
    handy to you. So I'll bequeath these to you.
23
    there's -- all right. And then lastly, are the green
24
    cards. So if it's appropriate, we'll switch places
25
    here.
```

-CALIFORNIA REPORTING, LLC (415) 457-4417-

CHAIRMAN RICHARD: I didn't know if it was too late to nominate Rossi.

2.1

Thank you, colleagues. I appreciate that vote, and I appreciate your kind words. I'd like to just say a few things. I won't promise it will be short, because people do that, and then you know that's a bad sign, but I'd just like to make a couple remarks, and then I will promise that other remarks will be short.

I was asked the other day by a senior official of the government whether we have a good board at the High-Speed Rail Authority, and I said, "Yes, we have an extraordinarily good board," and it's been my privilege to get to know the members of this board, some of whom I have known for a long time, but it is a very good board, and I'd just like to take a moment and talk about that.

I cannot improve on Ms. Schenk's eloquence with respect to Tom Umberg. He led this organization through one of its most turbulent times, as it really did move from a concept to a business plan that could move us forward. He did that, notwithstanding the fact that he is an active partner in one of our nations most prestigious law firms and has a very active litigation practice, and yet because his whole life has been about public service, not only to our country as a member of the uniform services but also serving in the state

assembly and now on this board. He's had a lifetime of public service. And we have been graced by his presence, and the best thing I can say is that while Tom is handing over the gavel, he remains and will remain an active and extraordinarily important part of this board. So I also want to thank you for your services.

22

23

24

25

Our senior most serving member, Lynn Schenk, who is vice-chair, mentioned that some people had been there at the beginning. Well, the fact of the matter is hardly anyone was there at the beginning. At the beginning, there was only an idea. For those who listened closely to the Governor's State of the State message last week, he mentioned high-speed rail is not a new idea, but, in fact, during his first term, he signed a bill that had initiated the studies of a California high-speed rail system. Well, that was the brainchild of the then Secretary of Business Transportation and Housing. And with all due respect, I was not a senior official in the first Brown Administration. I was a kid, but one of the people that I looked up to who wasn't very much older than I but was a senior official, was the Secretary of Business Transportation and Housing, Lynn Schenk, who literally gave birth to this idea that Californians should be connected with a high-speed monitored, electrified train system.

Later, as a member of the Congress, she authored an essential bill to establish national high-speed rail corridors, and we've just been fortunate that a person of that vision has done more than simply say, "Well, this is a great idea," and tossed it out there but has really tried to see it through for many, many, many years. And, Lynn, we're going to get to the point where you actually get on one of those trains in California.

2.1

MS. SCHENK: Thank you. Hopefully, without a walker.

Our board, Bob Balgenorth and Russ Burns, who represent working men and women in California. But in addition to that, because of those positions, they are very familiar with what it takes to build things in this state and how we have to work with contractors to make sure that these projects are done right that they come in on time and of the quality that the people expect. So we're fortunate to have that kind of expertise on this board.

In addition, as we look at the communities that we're affecting in the valley or on the San Francisco peninsula, we've been also fortunate that the board has consisted of people like Tom Richards and Jim Hartnett, who not only serve the entire state by trying to help build this system but spend many, many, many hours in

their communities listening, understanding, and helping us understand the issues on the ground there.

19

20

2.1

22

23

24

25

And finally, I want to mention my friend, Michael Rossi, who has become a new but old and dear friend, and he'll know what that means. Some of us did volunteer for this. Mr. Rossi, in fact, was drafted. He had the misfortune of walking down the hallway in the Governor's office just after another very capable member of this board, who had been appointed by Governor Schwarzenegger, had stepped down and who had a business background. And as I'm told, the Governor looked up and said, "Hey, there's Rossi. We can put him on the High-Speed Rail Authority. He's got a business background, " and that's how Michael became to be a member of this board. But like the true marine that he is, he dug in and has worked very, very hard, and he has been my right hand on this. We've worked together. We've become friends and it's just -- it's an honor to serve with him.

I note that there's been some press commentary that -- that although, as this was pointed out now, this is a part-time board that I've been asked to spend much more than that, virally full-time on this. But I don't want there to be any mistake, there's no member of this board for whom this is a part-time assignment.

Everybody embraces this body and soul, and people spend many, many, many hours taking time out of their active businesses, their law practices, and the other things that they have to do far in excess of what any part-time board would do.

2.1

So as Chairman, I may be spending virtually all my hours and minutes on this, but I can assure you that every other person up here has been deeply devoted to this project and spends the time it takes.

As was pointed out by Tom Umberg, we're blessed at the authority to have a small, over-worked, highly dedicated staff, and I've never seen as many people work so hard on something trying to get it done in the face of enormous challenges. The leader of that staff is our CEO, Mr. Van Ark, and the biggest question that I get all the time is, "How will you replace someone of his international renown and experience in high-speed rail systems," and the answer is, that's going to be exceedingly challenging.

I've learned a tremendous amount from Roelof.

I'm hoping that during the hours and minutes that we have left that I can cram as much information and knowledge into my head that he's willing to offer. And we owe him a debt of gratitude for exactly what

Mr. Umberg said, leading this board into a new era. And

so we really have a direction, a draft business plan, and a concept of how, in fact, we actually can bring these systems to connect Californians.

2.1

So with that, I just wanted to say that we have -- we have a very good board. We have a very good staff. We have excellent contractors working with us, and our challenge now is to look at what it will take to actually bring this system forward on the way that the Governor and other leaders of our state have called for.

And the last thing I want to say is this, we are going through and assessing the thousands upon thousands of pages of comments that we have received since our draft business plan was issued. We are looking at those comments, those critiques, those suggestions, criticisms. And despite where they come from or whether they're positive or negative or calm or angry, all of them are being considered and assessed.

And at this point, I think what I would say as I step into this position is that to me, two things are clear. The first thing that is clear is having listened to all this and assessed it and reflected on it, the fundamentals of high-speed rail in California are sound. We know that the ridership will be there. We know that the project can be constructed in phases as has been laid out by Mr. Van Ark. We know that we have a good

handle now as we've moved through design on the capital cost. And we know that the alternatives — that no one has made a case that the alternatives to high-speed rail would be anything other than more costly, more environmentally damaging, and in some cases, simply impossible to do. So those things are clear. The fundamentals of high-speed rail, the reasons why California should embark on high-speed rail are sound.

2.1

Having said that, we also know that our business plan probably can be improved in a number of ways, and the professional men and women of the High-Speed Rail Authority are looking at that very seriously, and as we revise our plan, I think that people will see that we've been responsive to public concerns.

So with that, I want to thank my colleagues very much for this, and we'll move forward. Thank you.

Now, being totally prepared, I do not have an agenda in front of me. Mr. Van Ark, could you help me out with that.

We will start with public comment. And what we've asked the staff to do is -- all of these -- if you have not filled out a speaker request form, please see Lisa Toof and do that. The speakers will be called in the order in which these come in with the exception that we afford our public officials the opportunity to speak

first, and I hope I have identified all of them.

2.1

And given that as is often the case, we have quite a number of speakers, and in order to make sure that everybody has an opportunity, Lisa, can we set the clock for two minutes per speaker.

Our first speaker is somebody who has been an incredible superstar, because he has never missed a High-Speed Rail Authority meeting, and that is Henry Perea from Fresno.

MR. PEREA: Thank you, Mr. Chairman, and congratulations on your appointment.

CHAIRMAN RICHARD: Thank you.

MR. PEREA: We're very excited that this board continues to move forward on bringing the dream of high-speed rail to California but two things. One is our heartfelt thanks from Fresno County and the thousands of residents who are in strong support of high-speed rail and, Mr. Van Ark, for the work that you have done in this past year to bring us to the position that we are in today so that this board could now move forward this year. It wouldn't have happened without you, and the people in Fresno Country recognize that. We thank you for it, and we'll never forget you. So thank you, and we wish you and your wife and your family the best of life. And Mr. Umberg, as you already said,

without your leadership this past year, you're getting us up to where we are. We wouldn't be able to make a decision. Thank you, and thank you for your service. It was really amazing having you phone in from Afghanistan. We all were very anxious to see what you looked like.

14

15

16

17

18

19

20

2.1

22

23

24

25

MR. UMBERG: I was actually just in Orange County.

MR. PEREA: I understand. Someone made the comparison but no, thank you. And, you know, underscoring walking in and the press conference that was outside, the working men and women of this state who understand that the primary purpose of high-speed rail is to be able to move Californians up and down the state in a whole new way. But behind it, of course, is jobs that we so sorely need in this state and the valley. And then the message from those folks as well as the veterans that were in the group with them is just like after World War II, you know, the folks in this country had the vision to build the infrastructure needed to make our country even greater then it already was, and they made the tough decisions just as you are making the tough decision to build the infrastructure for the men coming home from war to make sure that they not only have the infrastructure for their families but also

jobs. And that's what this is about too.

2.1

So thank you, again, for your leadership. A lot of tough decisions to make in the next few months, but I really think they're easy decisions to make when you're talking about the future of California and the future of the country and the future of our jobs for men and women.

So thank you very much, and have a good meeting. We will miss next month's meeting for the first time. We're going to be in Washington, D.C. sending a team to advocate with our legislators and other folks to advocate for high-speed rail.

MS. SCHENK: I think we should cancel the meeting.

CHAIRMAN RICHARD: Either that or we'll find a way, either with a cardboard cutout or some resolution for the virtual Henry Perea but we know you'll be here in spirit as you have been every time.

MR. PEREA: Thank you.

CHAIRMAN RICHARD: You are much appreciated. Thank you.

LeeAnn Eager it appears followed by Jim Bigelow. Good morning.

MS. EAGER: Good morning. As with

Mr. Perea, I have not missed a meeting. Even though

-CALIFORNIA REPORTING, LLC (415) 457-4417-

last time, I didn't get to speak. I was there. I promise I was there. I will be in Washington, D.C. with Supervisor Perea next month. So I'm sorry I'm going to miss that meeting.

2.1

As Ms. Schenk talked about, I was here when we had Mr. Deardon and Mr. Pringle, Mr. Kopp. And I have to say, I was a little bit worried when Mr. Pringle stepped down and Mr. Umberg stepped in only because Mr. Pringle had such a wonderful, sharp sense of humor. But I have to say, I was very surprised at -- at your sense of humor and thank you so much for your service.

And I have to say, I didn't know a lot about you until I went to the meeting with the South Koreans, and they gave your bio and you spoke so eloquently. So I do want to thank you for your service here on this board and also for your service to the country. Thank you for everything, but I really want to talk about Mr. Van Ark.

At the last meeting, when it was announced that he was retiring, it was almost a sock to my stomach. I have to say, it felt like we were getting a divorce. We have been working on this, fighting the good fight for so long, and what you have done this past year has been nothing short of miraculous. All of the issues that have come up, you have stood strong and fought the good fight. I thought we were going to fight this good fight

together for the rest of this time period, and hopefully we still will. But thank you so much for all that you have done for this project, and I'll still be here fighting that good fight with you in mind. Thank you.

2.1

CHAIRMAN RICHARD: And out of respect for Mrs. Van Ark, we'll ask the record to strike the divorce comment.

MR. Bigelow: Jim Bigelow with the Redwood
City San Mateo County Chamber. Congratulations to our
new chair and our outgoing chair. It's been a pleasure.

Roelof, I want to commend for his openness to come down and meet with all kinds of groups and try and get a consensus. It's been very, very helpful. Dan Levitt, who is not here, we worked with for years and years and who has been very helpful over a long period of time. So I think we're in a new era of moving ahead, and certainly the newspaper articles that are around would want to excite you to keep moving in a positive direction.

On the peninsula, the blended system, Some of our cities who have been both plaintiffs and not so supportive are now seeming to warm up more to the blended system. And they have commented on getting rid of the four-track system from San Francisco to San Jose and the Altamont build out in the EIR. I think that

would go a long way toward getting things moving along better on the San Francisco peninsula, and it would probably be good down in southern California, where the blended system is also being considered.

2.1

And we're also encouraging at some point, I know there's conversations going around about the 950 million relative to the Reno commuter feeder systems. Our Caltrain has about 350 million, to go to electrification and so forth. And I think an early consideration as things move along to release some of those funds both in southern California and northern California to start getting ready for high-speed rail and other segments might be helpful, and we encourage that.

So again, thank you, Roelof. You've been very good, and you have really extended yourself. And Chair Richard, I know you've done a lot of traveling and will represent us well.

CHAIRMAN RICHARD: Thank you.

Ralph Ochoa followed by Diana LaCome.

MR. OCHOA: Good morning, Mr. Chairman, members of the committee. My name is Ralph Ochoa. I'm a senior partner in the law firm of Ochoa and More, and Ochoa and More has been retained by the City of Palo Alto to represent its interests relative to the potentially negative impacts that the current revised

high-speed rail project might impose on the City of Palo Alto.

20

2.1

22

23

24

25

The City of Palo Alto opposes the current revised high-speed rail project plan. More to the point, the City of Palo Alto's position is that the high-speed rail project should be terminated because one, the current project fundamentally contradicts the measure presented to the voters under Prop 1-A in 2008. And number two, the plan has been reviewed by multiple expert panels as fatally flawed and simply not credible. Specifically on this point, the City of Palo Alto supports the findings of the Legislative Analyst Office of the State Auditor and the High-Speed Rail Peer Review Committee, which all question the viability and the accuracy of the authority's plan on such matters as the ridership projections, identification of sufficient and reliability funding sources, and the project management and operations of the high-speed rail.

On behalf of the City of Palo Alto, I thank you for the time.

CHAIRMAN RICHARDS: Thank you, sir.

MS. LACOME: Good morning, members of the board. Congratulations, Mr. Richard, on your new appointment, and Mr. Van Ark, we wish you all the best in your future endeavors.

My name is Diana LaCome, and I'm the president of the Associated Professionals and Contractors, or APAC for short.

2.1

First of all, I'd like to thank the board for the invitation to participate on the business advisory council and we look forward to -- we hope that we're one of the organizations selected, and we'll definitely participate in that. We are also very happy to see that the rail is moving forward on some of the recommendations that FRA outlined, which is one of the business councils.

Now, we know that there is strong opposition to this project from the peer review to special interest groups and so on and so on. We have never really taken a position one way or another. Our position has always been and will continue to be to support jobs, contracts for small businesses and just the economic revving of the engine throughout California. That is our primary concern.

We would like to recommend that you take a look at the California taxpayer dollars staying in California. We need it here in California. We need to make sure that the DBE and SBEs are able to compete and to receive contracts. We need to get the people to work as soon as possible.

Central California -- it's so sad, because central California is considered the new Appalachia. You know, with up to 70 percent of minorities in some of these counties, it's really a sad situation. So I think this position and for this reason, we are finally taking a position, a stand on this, that we do support the high-speed rail as long as you can bring in all these groups and get the project off the ground.

2.1

And we are here to let you know that we will be supportive in every way possible to assist this project and make presentations throughout the state and meet with the elected officials and so on, because we feel that this is really what is necessary throughout California. But at the same time, we --

CHAIRMAN RICHARD: Excuse me.

 $\mbox{MS. LACOME: } -- \mbox{ really want the DBE program}$ to be implemented. So thank you.

CHAIRMAN RICHARD: Thank you. My timer went to zero. I just wanted to make sure everybody has equal time. Thank you very much.

Dan Dolan followed by Michael Behen.

MR. DOLAN: Thank you for your time.

Congratulations newly elected chair, Dan Richard, and congratulations to Lynn Schenk, vice-chair, and I want to particularly thank Mr. Roelof Van Ark for all his

hard work, and I wanted to acknowledge Rachel Wall for her work and dedication and also outgoing vice-chair, Tom Richards.

I'm here to talk to you, to impress upon you that the board, and for the sake of Governor Brown and the authority, that we need to have an awareness of three important decisions that we will be making in the next several weeks. I'm part of a team that's going to be one of the qualified small business, minority owned business teams that will be bidding on the \$40 million right-of-way appraisal authority -- or RFP. And one item that seems to be missing from the July 2011 scope of work is the notion that your hundred and thirty mile initial construction section should have probably a million-dollar-per-mile title insurance to protect your federal dollars and state dollars that are going to be spent on the hundred and thirty miles and particularly the first eleven miles for the package number one. that is not being addressed, and it's not included within the \$40 million RFP.

Similarly, item two, full and total cost of right-of-way acquisitions, in my opinion, have not been fully addressed in the scope of work contemplated in July particularly the cost of these eleven hundred title reports and who pays for them.

And then the state auditor's January 5th, 2012 report, I've read the recommendations, and those need to be followed.

2.1

And lastly, I appeal to you that there be fairness and competitive bidding on this \$40 million contract. And that merely because one woman-owned regional consultant in Sacramento has been involved with all of the hundred and thirty mile primary contractors over the past several years.

CHAIRMAN RICHARD: Could I ask you to finish your sentence, sir.

MR. DOLAN: Yes. Okay. And talks to you daily that they may be shortlisted, but there should be one or more teams that are allowed on that contract for oversight.

CHAIRMAN RICHARD: Thank you, sir.

MR. BEHEN: Good morning. Michael Behen, City of Palmdale, Public Works Department.

19 | Congratulations to both of you on your endeavors.

The City of Palmdale believes in the high-speed rail's blended system approach. In particular, we would like to thank the board for their decision at the last meeting to reject the Grapevine Alignment so that we can work together to fine-tune an alignment for the Antelope Valley and also a station in Palmdale. We believe that

it sends a positive message that others should listen to that the board reevaluated the information that was provided. They listened to testimony, and then they made a great decision to stick with the Antelope Valley Alignment.

2.1

We appreciate that, and there's a couple things to point out what that decision will do. It will help us meet our regional air quality and transportation constraints. There's some serious issues there. It will also promote economic development and job growth.

We look forward to a continued partnership and are eager to see this project move forward full steam ahead. Thank you for your time.

CHAIRMAN RICHARD: Thank you very much.

MR. BEHEN: Thank you very much.

David Schwegel -- I hope I pronounced that right -- followed by Ryan Soria.

MR. SCHWEGEL: Good morning. Thank you all for your valuable service. PR, communications, and outreach, a herculean effort fit for an army. Three points that we need to drive home as we force through the storm clouds ahead. First, economics, USHSR say that this is our largest, most advanced project in the nation and the top five in the world. The busiest, most profitable line in America, and I should mention that

Governor Brown's assertion that the 98.5 billion were far too high, that enhances the credibility of the comments in the business plan that it is, in fact, conservative, and we need to, of course, keep in mind the cost of collision and congestion, huge for society.

2.1

Also, on the debate of west, north versus south, which comes first. Go north. Launch new high-tech industries in the Silicon Valley, connect the BART San Jose extension, and who knows, our friends in Atherton and Palo Alto might have a change of heart when they see that it's much faster to come in via the peninsula on high-speed rail to San Jose than it is to take BART clear up through the city and around the bay.

And also Hill and Nolton, third point, reminds us of selling the concept of one hundred percent quality productive time while on board. When I came in from Granite Bay, I thought long and hard about driving in, but reading Derailed while driving derails many. Sell the concept of one hundred percent quality, productive time. Umpqua Bank CEO, Ray Davis, says, "The world watches the US. The US watches California." Build it. Thank you.

CHAIRMAN RICHARD: Thank you, sir.

Ryan Soria, Operating Engineers Local 3. It looks like we have a bunch of folks in Local 3 today.

Okay. Bud McKinney followed by Thomas Brandon it appears.

2.1

MR. MCKINNEY: Good morning. Thank you, Chairman. Thank you, members of the board. My name is Bud McKinney, and I'm a proud sheet metal worker, and I've lived in California all my life, and I've seen controversies like this come up before.

We had a controversy when we built Highway 99 and the destruction it was going to do to the community.

It's literally a lifeline to Sacramento now. I-5 was the same thing, California aqueduct -- We've had these controversies before, and where would we be if we hadn't built these things?

High-Speed rail is the future in California, and we need it, and I'm urging you to build it.

CHAIRMAN RICHARD: Thank you.

Mr. Brandon followed by Terrence Long.

MR. BRANDON: Good morning. Congratulations and thank you for letting me speak today.

My name is Thomas Brandon. I'm the secretary/treasurer of the California Consulate of Machinists, and on behalf of the 30,000 machinists in the state of California, we support this train, and we hope that it gets moving. Thank you.

CHAIRMAN RICHARD: Thank you.

-CALIFORNIA REPORTING, LLC (415) 457-4417.

Terrence Long followed by Hector Estrada.

Ryan Camp. Steve Laird. Oh, okay.

Are you Mr. Camp?

2.1

MR. CAMP: Yes. Ryan Camp. Thank you, guys. I spoke in Merced, and I'll just reiterate myself. I am representing the Merced, Mariposa Central Labor Council, but today, I'd like to tell you a little bit more about 2003.

Late 2003, I got out of the military service, aftershock and all, and the economy was still good. I was able to get a job with a good Teamster contract, but now I don't see those jobs for the thousands more of our veterans coming home since the last time I talked in Merced.

So if you talked to the VA and you see the statistics of our soldiers taking their lives, 18 a day, you talk to the VA, it's because they don't have anything in their hands. They don't have tools. They don't have the tools of the trade, and that's what they want to do. They want to work. They want jobs. I mean, the best therapy in America is a good job. I mean, these guys need good jobs.

So I'm here to advocate not for union jobs but just for good jobs to get our veterans working again. That's what we need right now. They're able and

willing, and we have them now. So let's please -- let's 1 2 use them. Thank you guys for your time and what you're 3 doing. 4 CHAIRMAN RICHARD: Thank you. Steve Laird. 5 MR. ESTRADA: My name is Hector Estrada. 6 7 I'm a member of the Operating Engineers Local 3, and I've been one of the few fortunate persons as a surveyor 8 9 working on the project, and I want the project to 10 continue, so I can continue to work on this project. Wе 11 have a lot of highly skilled laborers, members that 12 would continue to work on this project. Please 13 continue. Thank you. 14 CHAIRMAN RICHARD: Thank you. I just want 15 to take a moment. I had said we'd take the speakers in 16 order unless we have public officials, and we afford 17 them an early opportunity. I know we have a member of 18 the Kings County supervisors here. 19 Supervisor, had you intended to speak? 20 MR. VALLE: Yes, Mr. Chair. 2.1 CHAIRMAN RICHARD: If you'd like to go now, 22 we'd be happy to do that. If you'd like to wait, 23 because there's other members of your community here,

MR. VALLE: Thank you, Mr. Chair.

but we're happy to welcome you now, sir.

24

25

-CALIFORNIA REPORTING, LLC (415) 457-4417-

Congratulations, Mr. Chair and fellow board members for your service as well.

2.1

Mr. Chair, as you know, Kings County has been to the podium many times and reaching out to your board asking for a commitment to sit down and talk to coordinate to allow Kings County to speak about the impacts that we would have if the project, in fact, came through Kings County. And that being said, I want to tell you, I feel very encouraged, and I want to thank you for the short discussion we had prior to the meeting and hearing from you personally about your commitment to come to Kings County, and I will relay that, that commitment back home and look forward to having you there and more importantly, having our constituents have the ability to sit down and relay their concerns.

Speaking of back home, I wanted to show this photo here. This is the "Corcoran, Save our Home" photo. These are community members from Corcoran who would be impacted by the project coming through the City of Corcoran. These are folks who would love to be here today to have made the trip to Sacramento, but like many of us, they have commitments, children back home. But I made a commitment to them that as long as I'm in the room, they would be in the room.

So the Save Our Homes campaign is just to

continue to do outreach to you and your board members.

The City of Hanford took their photo earlier this week,
and we look forward to you seeing that in Kings County.

Thank you for your time, sir.

2.1

CHAIRMAN RICHARD: Thank you, supervisor, and if you would please convey to your board chair, Supervisor Fagundes and your colleagues, Supervisors Neves, Verboon, and Barba, that you will be receiving a letter from me. We'll be looking forward to coming to Kings County meeting with you and your colleagues.

MR. VALLE: Thank you, sir, that means a lot.

CHAIRMAN RICHARD: Thank you.

Tim Smith followed by Jonathan Mariscal.

MR. SMITH: Good morning, Mr. Chairman, members of the authority. I just come before you today to reiterate some things that I'm sure you've all heard many times before.

I'm the State Chairman of the Teamsters Rail
Conference here in California. I represent thousands of
workers, locomotive engineers, conductors, and
maintenance of way workers. We are 70,000 strong
throughout the United States. And obviously, everybody
is concerned about high-speed rail not only in this
corridor but in the other corridors throughout the

United States. So we all have a vested interest in it.

2.1

I speak before you to address these issues simply because we have a problem with our economy. The economy needs to be addressed especially in the State of California, because it seems like it sets the trend, sets the example for the rest of the nation to follow.

There's one percent of our populace in the United States today that are sitting on \$2 trillion worth of funds, and they're not doing anything with it. In the past, in order to get our economy around large infrastructure projects, were created. It worked for FDR. It worked for Eisenhower and others, and it will work here again now.

Investing in our infrastructure by creating the nation's first high-speed rail system is definitely the answer. We have no choice but to begin this project using the state's government Prop 1-A bond funds that were allocated in 2008. A lot of funds were awarded by the federal government since then. Once California commits to proceed with the high-speed rail project, the private sector will see potential money to be made and will let loose of some of the aforementioned \$2 trillion nest egg and invest in high-speed rail. They won't do it, though, unless the state government can commit first.

Many people within the state will gain employment 1 2 because of it, and when they earn, they spend and they 3 pay taxes. The businesses and stores they spend their 4 money in will prosper, and in essence, pay it forward. 5 The state income taxes will rise, the sales taxes will 6 rise, and the standard of living for the bulk of 7 Californians will be enhanced. California's revenue 8 will be greatly increased and our debt issues will be resolved. This is a win/win scenario, so we have to 10 commit to it and cease looking for excuses to say, "no." 11 So long story short, we've got 38 million people 12 in this state. We have a definite transportation 13 problems. 9/11 is a primary example of that. I think 14 we need high-speed rail more than we know. So as far as labor is concerned --15 16 CHAIRMAN RICHARD: Thank you, sir. MR. SMITH: -- we stand behind this project. 17 18 CHAIRMAN RICHARD: Thank you, sir. 19 Mr. Mariscal if you could hold on for a minute. 20 Did I miss Mr. Laird? Mr. Laird, I'm sorry, sir. 2.1 I was moving too fast. Then Jonathan Mariscal followed 22 by Ed Ritchie. 23 MR. LAIRD: I'll be short and sweet. I just 24 wanted to say that I'm a California resident.

-CALIFORNIA REPORTING, LLC (415) 457-4417-

represent the Operating Engineers brothers and sisters

25

who are well trained and want to go back to work, and with this being passed, a lot of our brothers and sisters will be able to go back to work. Thank you.

2.1

CHAIRMAN RICHARD: Thank you.

Mr. Mariscal. Thank you for your patience, sir.

MR. MARISCAL: Members of the board, thank you for your time. My name is Jonathan Mariscal. I'm an apprentice at Operating Engineers Local 3, and I just want to say that, you know, I grew up in the Bay Area with BART. It took me to and from my family for many occasions and took me lots of places, and I'm sure before BART was built, there was a lot of people who were put to work because of it and made money and were able to pay their bills and take care of their families.

In doing the high-speed rail project, I think that it will create a lot of jobs for people and people who want to go see their family if they have some family. I have some family in southern California that I'd like to go see -- to and from -- for family occasions and for things like that but mostly for the work.

I've been out of work for about a couple weeks now, and I'd like to get back to work. And if there's no work, there's no jobs. Then I can't pay my bills, and I'm sure that many of my union members and the

labors around California would appreciate having this project to work on to be able to support their families. Thank you.

CHAIRMAN RICHARD: Thank you.

Mr. Ritchie followed by Matt Schrader or Schroeder, I'm not sure.

2.1

MR. SCHROEDER: Hi. Good morning to the board. I would just like to say a few words of encouragement and thank both the boards, past and present, for their vision here in California. And we all know projects today are going a lot cheaper than they have in the past. Most engineer estimates are coming in — or the bids are coming in under the engineer estimates.

And that was about all I had. I wanted to say a couple words of encouragement to you guys and keep up the hard work, and thank you for what you have done.

CHAIRMAN RICHARD: Thank you, sir.

Matt -- I'm sorry. I hope I didn't mispronounce your name.

MR. SCHROEDER: You did just fine.

Mr. Chair, committee members, I want to start off by saying thank you very much for carrying your vision and the efforts that you put into this to make sure we move forward in the future in the State of California.

I'm a fourth generation Californian. I've been in the construction industry for 25 years. One of the things that comes to my mind is the regulations in the future, the state and feds, will continue to control the direction of transportation. If we don't start working on our future now, it's going be more costly. It's going to cost the state and the people more — taxpayers more money to be able to implement the regulations for transportation. It's going to bind us up.

One thing is, my son's a fifth generation

Californian going to UC Davis. He's a mechanical

engineer. He comes home occasionally, and he says,

"You know, Dad, where are the people in California with

commonsense?" He goes, "Can't they see that this is the

future of transportation?"

And one thing in closing is that the cities that oppose the high-speed rail, they really need to step up to the plate, help be the solution, work to solve the issues at hand, and get this project moving. Thank you very much.

CHAIRMAN RICHARD: Thank you. Jason -- is it Rofler? Followed by Marcie Bayne.

MR. RAFTER: Good morning. Jason Rafter.

CHAIRMAN RICHARD: I'm sorry, sir.

MR. RAFTER: Not a problem.

2.1

2.4

-CALIFORNIA REPORTING, LLC (415) 457-4417

I'm a apprenticeship coordinator for the

Ironworkers, and I just want to say on behalf of all the

ironworkers across this great state of California, we

are in support of the high-speed rail. We are

diligently training all of our apprentices daily

throughout, you know, the last couple years through this

downturn in the economy.

2.1

Our guys are ready to build all that beautiful skyline that you see behind you. All we need you guys to do is to approve it and get that thing going and get our guys back to work. Thank you.

CHAIRMAN RICHARD: Thank you.

Ms. Bayne followed by Angelo Cellini.

MS. BAYNE: Good morning and thank you for your service. My name is Marcie Bayne, and I'm the Executive Director of the North Valley Labor Federation, and we represent the workers from Lodi to Merced, approximately a hundred thousand union workers in the valley, and these guys, as you can hear one by one, need the jobs.

We don't represent just building trades but service unions as well, and so as the train gets built, they will provide the service. And when our workers work, we turn the economy over seven times. They go to lunch. They buy tools. They buy trucks. They do

things they can't do when they're unemployed, and so the jobs are so important to revitalizing both the Central Valley economy and the State of California's economy so then we can improve our schools as well. They want to work, and this high-speed rail will provide thousands of good paying union construction jobs starting this year and ongoing for many, many years.

2.1

I have believed in high-speed rail since the very first time I rode the monorail in Disneyland as a very young girl. It needs to get started. It needs to get started now. I want to ride it, and hopefully, I can ride one of the first ones. The idea of going from Sacramento or Stockton or Modesto or Merced to San Diego in an hour and a half is a delight for me, because now it takes eight or nine or ten hours to make that drive, because the flights are impossible. Thank you very much.

CHAIRMAN RICHARD: Thank you.

Sir, is it Cellini or Cellini? Okay. Got it right the first time.

MR. CELLINI: Good morning, Chair, committee. I appreciate you letting me speak today.

I've been an operating engineer for 32 years and work has been fairly well, but this last downturn has really put a damper on things. And I'm here -- I need

to get our guys back to work. A number of us are here to -- we want to get that to happen. So if you could, let's keep this thing on track and get our jobs going now. Thank you very much.

2.1

CHAIRMAN RICHARD: Thank you, sir.

I'm having a little trouble reading this next one.

It looks like Michael Strong perhaps, and I apologize if

I got that wrong. Followed by Rod Westberg.

How did I do with your name, sir?

MR. STRONG: Michael Strong, and I am an operating engineer and I ask you that -- I thank you for your thoughtful service but I would ask that consideration be given that, you know, this isn't just about jobs -- and it is, and it is about job -- but it's the right thing to do. And one of the things we have done, one of the things that I strive to do every day, is to just do the right thing, and I would ask the High-Speed Rail Authority just to simply not derail California. Thank you.

CHAIRMAN RICHARD: Thank you, sir.

MR. WESTBERG: Good morning, gentleman, lady. This is the first time I've ever done this. I'm an operating engineer. My name is Rod Westberg. I've been in the industry 35 years. I've seen the way the transportation system has been plugging up, and all we

have been doing is playing catch up. So high-speed rail is the only thing that makes nothing but sense. So my question is why didn't we include Portland, Oregon; Seattle, Washington; and Sacramento, California?

CHAIRMAN RICHARD: Thank you.

2.1

I apologize. I'm really having a hard time deciphering this last one, but it's a person also from Local 3 from Yuba City. It looks like Sycamore Street. "Lamont" maybe.

Can somebody read this. Let me put it this way,

I have a growing appreciation for Mr. Umberg's services
as Chair.

Okay. Yes, it looks like a "Lamont."

MAN IN AUDIENCE: He went out to feed the parking meter. I don't think he'll be back.

CHAIRMAN RICHARD: Okay. If that person does comes back, would you let him know to maybe see Ms. Toof, and we'll go from there.

Okay. Billy Powell followed by Kyle Holloway.

MR. POWELL: Good morning, Mr. Chairman, members of the board. Billy Powell, secretary/treasurer for the Building Trades for Stanislaus and Merced Counties. I just want to express our continued support of this project and want to thank you for your service. Thank you.

CHAIRMAN RICHARD: Thank you.

Kyle Holloway. Kyle Holloway followed by Charles Bynum. Charles Bynum.

Mr. Bynum, Good morning.

2.1

MR. BYNUM: Thank you, Mr. Chair. My name is Charles Bynum, and I'm in support of the high-speed rail. Not only does it create good jobs for everyone, and the economy, it will keep it going and keep the air cleaner and also keeps the roads from going to pot as the way it is right now with many cars going down the freeway. It will get the people there a lot faster to L.A. than to get out of planes, get out of their cars.

There a lot of guys like myself who have either almost lost their homes or have lost their homes due to low jobs. I never experienced this before in my life until 2008 hit. So it will mean a lot to me and a lot to my construction companions and brothers and sisters that we need to get this thing going to keep the economy going, because we know that — because construction is a small part of the industry, but it's a part of the engine that keeps everything else going. Because like the person before me said, as long as we're making money, we're going to the stores. We're going to buy things. We're buying cars. We're buying homes. We buy those things to keep, not to lose, and that's what's

-CALIFORNIA REPORTING, LLC (415) 457-4417-

going on right now if we don't get this thing going.

CHAIRMAN RICHARD: Thank you.

2.1

John Rector followed by Arthur Scott it looks like.

MR. RECTOR: Good afternoon -- or good morning and I thank the authority for all of your hard work past, present, and in the future with this project.

The state workforce is struggling right now. I'm a member of the operating engineers and proud to be one, and we all know what happened since 2008 with construction. With the work force down, those people aren't spending money, and this project is going to put people back to work, and they're going to reinvest in their community, and they're going to begin to spend money. They're going to help the state pull out of the current economic situation they're in.

California has always been an innovator and a leader when it comes to technology, and we shouldn't be the last ones to adopt this. Europe has got it. Asia has got it. Let's not derail California. Thank you.

CHAIRMAN RICHARD: Thank you.

It looks like a Mr. Scott from Hanford.

MR. SCOTT: Good morning. Congratulations, and I think there is a new era coming, but, however, there's some unfinished business on the table.

You speak of platitudes and so on, and I'm reminded by the gentleman that spoke earlier from -- for the City of Palo Alto group. The peer group, the auditor, the treasurer, the Legislative Analyst Office, local governments and I'm not going to list all of the ones that are in opposition. There's also a number of both parties, representatives both local -- both state and US that are expressing concerns about the expense of this project is proposing.

2.1

Clearly, the University of Berkley, Institute of Transportation Studies, has some real serious issues with this, too, and I'll interject right now, I'm not against jobs. I'm not against anything that's going to make things better. I'm against a system that has this many people saying, "There's some issues with your program, and they haven't been revolved."

So because of some stuff that happened on the way up, I'm going to go to the end here and say these are some of the things that we're really concerned about.

The state is broke. It's going further in debt if you continue this project. The state will incur serious debt services for decades, and that's not addressed anywhere in any of the complaints.

The United States of America is almost 16 trillion in debt and going further in debt, which means

there is a lack of fund extreme that will be coming into this, because the State of California has no money to give to this project.

2.1

Saying it can be done for less, I'm not sure that's a correct statement. The union members and all the leadership wanting to get things done, now some of theme are questioning the dollar value. Attempts to fix this disaster with the legal and regulations, state and federal, have not been mitigated by the letter of the law.

And in closing, I think the biggest thing is and the gentleman from -- that spoke for Palo Alto said, it's not in accordance with Proposition 1-A. I'm against it. It needs to be done right. That's all I'm asking. Thank you.

CHAIRMAN RICHARD: Thank you, sir.

Jerry Seiff -- or Seiff followed by Russ

Browning -- or Ross Browning. Excuse me, Mr. Browning.

MR. SEIFF: Good morning. My name is Jerry Seiff. I'm an operating engineer, a 22-year member.

The people you see come up here in the blue jeans and

boots, that's the face of who this will help.

Since 2008, you know, I've had to worry every year, "Am I going to work this year? Am I going get enough hours for insurance for my family? Am I going to

have enough -- something for my retirement?" I don't want to be doing this all my life. I enjoy what I do, but I do have plans later, and I know that this project will help so many trades not just ours, but it will help the ironworkers, pipe fitters, carpenters, and that's who really spends the money. That's who really builds California. That's really who makes the state run. Without us, without our money coming in -- not to mention the infrastructure just collapsing in on itself and it will if things aren't done.

2.1

This project has a chance to be a shining star in our state, and I love my state, but, you know, I'm tired of worrying every year if I'm going to work this year, get my thousand, or whatever it takes to get insurance.

And I know that you people on the board are working diligently to move this project along, but we are truly the face of the people who this will affect, and I need your help. I want to work.

I don't want to work in another state, because, you know, there's jobs out there. I don't want to go to another state to work. It's bad enough I got to leave my family every year and go down to the Bay Area and work. But that's part of my business and my worries, but I really don't want to work out of state or out of the country. So I thank you for your time and good

luck.

2.1

2 CHAIRMAN RICHARD: Mr. Browning.

MR. BROWNING: Making these chairs harder to get out of every year.

Good morning, sir, and again, congratulations on your -- I hope it's congratulations -- on your new position. Although, I'm not sure that you guys are going to have much to do, because I heard Governor Brown in his speech say he was going to redesign this project. So you guys got it made.

I would like to talk to you about jobs. I hear and have heard, many times coming before this board, members of operating engineers and construction engineers and this labor council and that labor council, and they come up here, and they they're pleading. They want jobs. And there were two members mentioned, Mr. Burns back up north, who have a labor background, and I'm surprised that those gentlemen didn't say anything when they were here.

But the number of jobs, you've got to come clean. You've got to tell the people how many jobs there will be. We've seen numbers from one million down to 25,000. Nobody can plan or nobody can do anything with a range of data like that. I think you have to come clean and be a little more honest with the folks on the job basis.

And the other thing, speaking about jobs, nobody 1 2 has mentioned how many jobs will be lost. How many jobs are going to be lost by retail businesses in the City of 3 Fresno? Take away this business, some of those jobs are 4 5 going to be lost. Those people will be out of work. How many jobs will be lost in the farmland? Every time 6 7 you take an acre away, you take away x number of people. 8 I can't tell you what the number is off the top of my head. I can tell you how many cows you lose, but I can't tell you how many workers you lose. Nobody has 10 11 mentioned how many jobs will be lost, but there's a 12 little give and take there. I'd like to see some 13 numbers generated on that. Thank you very much. 14 CHAIRMAN RICHARD: Thank you and before I 15 ask Mr. Olivera to come up, Mr. Browning, would you convey my thanks both to you and your wife. Both of you 16 were very gracious when I visited. 17 18 MR. BROWNING: I will. Thank you very much, 19 sir. Come on down any time. 20 CHAIRMAN RICHARD: We'll be back. 2.1 Mr. Olivera. 22

MR. OLIVERA: Thank you, Mr. Richard, for an opportunity to speak before you folks.

23

24

25

I don't know if the board members understand that I've actually been to the last 15 meetings, board

-CALIFORNIA REPORTING, LLC (415) 457-4417-

meetings. I didn't speak at the first seven -- or first eight -- seven because there was no reason to speak. I was trying to figure out what was going on, how this affected me, my neighbors, other people. But on May 5th, 2011, information was presented to this board that was not true, blatantly not true, about the community that I live in. Decisions were received based on that information from staff. The authority board, based on that information, proceeded with the environmental process.

2.1

If that information was true, I can understand the decision, but it wasn't true, and the representatives from the community attempted to correct that in good faith. We were told to go away. Nobody cared. "Go back and find friends." So we did. Now we've become the opposition, because we simply said, "This isn't right, what's being be done." It's still not right. Our due process was violated along the way. Our civil rights were probably violated. The law was broken in dealing with us.

So all of that said, we've been the opposition.

Now, I have a lot of hope, because Mr. Richard came down and visited with us in the community last Friday. I support his interaction with us and our elected officials, because that's all we asked for all the way

along the line is a opportunity to work with the board on factual information.

2.1

I urge you not to accept the minutes or approve the minutes for the last meeting, because the minutes reflect, under the station planning section, that certain things were true that are not, and the minutes before you continue on the perpetuation of fraudulent information. So I urge you not to accept the minutes, to get it right, build this section right.

I'm going to move because it's not my time.

These places object to you, because of this kind of activity, and we would like to change that and work with you, and I'm looking forward to it in the future. Thank you.

CHAIRMAN RICHARD: Thank you, Mr. Olivera, and thank you also for taking time last week and showing me the situation on the ground. I appreciated that.

William Mack followed by Raymond Burton.

MR. MACK: Hi, I'm William Mack, and I'm from the operating engineers also, and, you know, it looks to me like you guys have a lot of hard work ahead of you on this thing. And I really appreciate the work you're doing on it.

A community is like a growing -- something that's growing and it's either growing or it's dying. And the

men that you have heard here today that walked up and said they need jobs, those men are -- you know, and the possibility of them moving to other states or other areas. And that makes the community die, when you lose people that care about a community enough to come up here and talk.

And I'd just like to let you know that I'm in full support of this system, and I know the operating engineers are, too. Thank you.

CHAIRMAN RICHARD: Thank you, sir.

11 Raymond Burton followed by Anthony Lima.

12 Mr. Burton? Raymond Burton?

2.1

Anthony Lima followed by Rob Carrion.

MR. LIMA: Good morning, Chairman, fellow members of the board. My name is Anthony Lima. I'm a California native, resident and member of operating engineers.

I'm in total support of this high-speed rail initiative. I see the long-term benefits and the gains that can come from it not only putting my craft back to work and other craft members but non-tradesmen as well. The reciprocating jobs that will flow down by this being built would be very beneficial to the California economy.

One of the things I'd like to also point out too

is that I'm very pleased with your guy's focus on the solutions to the problems, and one of the problems that we may be facing is the lack of additional federal funding if we don't break ground and do something soon.

And with that, I'd like to say thank you for your time and can -- let Rob Carrion have the rest of my time as well. Thank you.

CHAIRMAN RICHARD: Mr. Carrion is going to have his own time, which is fine.

Mr. Carrion.

2.1

While he's coming to the podium, I just want to say one thing. A number of people have thanked us for our time. This is your time. We've actually got several people on this board who have worn this country's uniform to make sure that this is your time. So you don't have to thank us. This is your time to speak to us.

Mr. Carrion.

MAN IN AUDIENCE: I believe he left.

CHAIRMAN RICHARD: Okay. Matt Wainright.

Okay. Anne McMonigle followed by Jamie -- or -- this is a tough one.

MS. MCMONIGLE: Good morning. I'll be brief. My name is Anne McMonigle. I'm here on behalf of the California Labor Federation. We represent both

brothers and sisters in the building trades as well as in the operating and maintenance side of this project.

2.1

We need the jobs, and we need them now. We need the investment in the valley. We continue to support you on this project, and we look forward to working with you further. Thank you.

CHAIRMAN RICHARD: Thank you.

Okay. I apologize for this, but it's a person who is representing "I Will Ride" from Lake Road in Merced. "Jamin" or "Javier" or something like that.

I'm sorry. That's the best I can do with this.

Okay. Sean Duffy from "I Will Ride."

MAN IN AUDIENCE: He also left.

CHAIRMAN RICHARD: Okay. Daniel Martinez.

MAN IN AUDIENCE: Also had to leave.

CHAIRMAN RICHARD: Okay. David Cameron followed by Michael Lomio.

MR. CAMERON: Thank you, Chair, and thank you for your service. I know that the board is in good hands with you being elevated. And, Tom, thank you for your service both in uniform and on this board. And Roland I am -- Roelof, I am like -- was stunned when you stepped down last night, but I thank you so much for putting this project on a very strong foundation to move forward.

My name is David Cameron. I'm with the
Internation Brotherhood of Teamsters. I'm the Assistant
Director at the Teamsters Rail Conference. We represent
70,000 locomotive engineers and maintenance of way guys
and -- as well as 1.4 million workers around the
country. And we are very strong supporters of this
project. We've been discussing high-speed rail in this
country since 1964 when the first legislation was passed
in the US Congress. That was 47 years ago.

2.1

And I just got back from France where I did the TGV from Aix to Paris, about a 500-mile trip in about three hours. A remarkable ride, much steadier than the Amtrak trains and clearly much faster.

We're strong supporters of this, and we can't wait for the first shovel to hit the ground. Thank you.

CHAIRMAN RICHARD: Thank you, sir.

It's either Michael Comio or Lomio from "I Will Ride." May have left also.

Oh, I'm sorry, sir. Good morning. How did I do with your name?

MR. LOMIO: It's pronounced "Lomio," L-O-M-I-O.

I'm a student from UC Merced, and I'm originally from San Jose, but I just want to express how truly gratified I am that you guys are actually creating

high-speed rail for the Central Valley and for the State of California as a whole.

2.1

I go to UC Merced, and it was once a dream but became a reality, and high-speed rail can also become a reality one day. And I think that UC Merced and high-speed rail together would create Merced into a greater system, a greater economy, and I think that high-speed rail would also improve the state's economy as well as Merced's economy as well.

But, You know, we have a infrastructure problem that we need to handle, and I truly believe that high-speed rail will actually help this. And being a political science major and economics major, I took ECON 1, and I can already tell that infrastructure is the key to improving our economy, and I think that this will truly help it. Thank you for your time, and thank you for doing this project.

CHAIRMAN RICHARD: Thank you.

Ryan Heller followed by Paul Guerrero.

MR. HELLER: Good afternoon. My name is

Ryan Heller. I'm the founder of "I Will Ride," which is
a student group at UC Merced dedicated to advocating for
high-speed rail and supporting the project.

I just wanted to say, at the very beginning of this meeting, the Chairman said, "We know the ridership

numbers are there," and I agree. You're looking at them. They're in this room. They're up and down the state. My colleagues were here earlier, but they had to go lobby their legislators. But they are among those numbers, and so that is the point of our message is that "I will ride." We will ride this project when it comes to fruition. We're in strong support. We appreciate the work that this board has done. We appreciate the work of the CEO as well.

We need this. California needs this. This is the future of transportation. This is a 21st century project truly. And to us, nothing is more important than having gainful employment after college and making sure that this project happens and that it breaks ground on time is the single most important thing we can do to that end. And so we appreciate the work of this board, and we continue to support this project. Thank you for your time.

CHAIRMAN RICHARD: Thank you.

Paul Guerrero.

2.1

MR. GUERRERO: Good morning.

Congratulations, Mr. Richard. I'm speaking on behalf of La Raza Roundtable. We are a Hispanic organization our membership stretches from Fresno to San Jose and myself from Stockton and others in Stockton. So we cover the

Central Valley pretty well, and we cover the Bay Area.

2.1

2.4

And so I spoke many times before this board, but I have never said, so that you know, that we support this project. We always have supported this project, but we want to participate in this project. Our contractor members want to build the project, and we have people that are in the trades who want to build this project, and so we have a vested interest in seeing this project get off the ground.

We urge you to adopt a DBE program that is separate from this small business program. You started going with a race-neutral program, which you can start immediately and then expedite the disparities study. So we get that done before we break ground, and then let's get a final program going. But I want to, again, say La Raza supports this program. Thank you.

CHAIRMAN RICHARD: Thank you, sir. Jessica Gibson.

MAN IN AUDIENCE: She left.

CHAIRMAN RICHARD: Okay. And then the last comment form I have is from Ed Dunkel Jr., and if there's anybody else that wants to fill out a comment form, this is the time to do it.

Mr. Dunkel. All right.

MR. DUNKEL: Mr. Chairman, members of the

-CALIFORNIA REPORTING, LLC (415) 457-4417-

board, thank you. I don't listen very well, so thank you very much, and I hope the gentleman before wasn't prophetic, and we're not moving our vice-chair. So thank you for your service.

2.1

I want to thank you, Mr. Umberg, and Mr. Van Ark very much for their service. You handled your positions with dignity and class. And frankly, you've had to put up with a lot of BS, and you've handled it wonderfully. So things have been thrown to you that were unjust and unkind to say the least, and the way you've handled yourselves is more than good. So thank you so much.

You know, I stand before you, I'm from the

Central Valley, 5th generation, and we need this project

more than anything. I know that construction dollars go

through the economy seven times -- seven times,

construction dollars. People say you can't afford to

build it. I say you cannot afford not to built it.

I see the people hurting. I know how construction dollars go through the economy, because I remember being tide to the local residential market. People were prospering because of how the residential market was working, and all the ancillary businesses that were connected and were able to make profit and people be employed, were immense. When that took a downturn, it hurt the economy everywhere, and this will

do the same thing as far as helping our economy. The number of jobs, the ancillary businesses that will be supported through this, will be immense.

2.1

I do know this, unemployment and welfare, the return on investment on that is not very good. So if we put money into our economy with this construction project, things are going to happen that are good. So again, I thank you very much for your service, and keep up the good work.

CHAIRMAN RICHARD: Thank you. I have no more speaker requests. So with that, the public comment period is closed.

We'll move on to Item 3, which is the Approval of Minutes. Do I have a motion on that?

MR. UMBERG: I'll move.

MR. RICHARDS: Second.

MR. HARTNETT: Second.

CHAIRMAN RICHARD: Moved by Mr. Umberg, seconded by both Mr. Richards and Mr. Hartnett.

Secretary, please call the roll.

And, Lisa, I think it's a matter of personal preference, but in my past experience on the BART Board, the Chair always voted last as not to try to send any signals to the board members. So if you could drop me to the last place on that, I'd appreciate it.

```
1
                MS. TOOF: Sure. Okay.
2
           Mr. Richards.
3
                MR. RICHARDS:
                                Yes.
                MS. TOOF: Ms. Schenk.
 4
5
                MS. SCHENK:
                              Yes
6
                MS. TOOF: Mr. Burns.
7
                MR. BURNS:
                            Yes
                MS. TOOF: Mr. Rossi.
8
9
           Mr. Hartnett.
                MR. HARTNETT:
10
                                Yes.
                MS. TOOF: And Mr. Richard.
11
12
                CHAIRMAN RICHARD: Yes.
           Okay. Item 4.
13
14
                MS. TOOF: Did I leave you out?
                MR. UMBERG: I'll vote "yes."
15
16
                MS. TOOF: Did I leave you out?
                                                  I'm sorry.
17
                CHAIRMAN RICHARD:
                                    That's what happens when
    somebody comes along and changes the order.
18
19
           Mr. Umberg will be reported as an "aye" vote.
20
                Okay. Next, Item Number 4, Mr. Van Ark.
2.1
                MR. VAN ARK: Mr. Chairman, members, the
22
    issue Item Number 4 relates to the Board Policy and
23
    Procedure Amendment. You personally had indicated to me
24
    an interest as well to look at the possibility of
25
    focusing more on an audit committee, as in the past year
```

-CALIFORNIA REPORTING, LLC (415) 457-4417-

Chair Umberg as well as the vice-chair Schenk, they had discussed this issue with us quite a few times. And so what we did do is put this on the agenda for today for consideration by the board.

2.1

On considering the policy as it stood, it was clear that many of the issues that fell into the financial committee's responsibilities were those that would normally be done by an audit committee in any case, and for exactly that reason, we have now recommended that the Finance Committee be renamed the Finance and Audit Committee of the board and that the audit responsibility be added as one of the responsibilities for this committee to look at.

One of the reasons being, we just recently had a Bureau of State Audits re-audit, and it -- clearly, in situations like that, it would be good to have a Finance and Audit Committee who would be responsible for issues related to that audit as well.

CHAIRMAN RICHARD: Thank you, Mr. Van Ark.

Before I ask for other comments, let me also say that I believe it's correct that then Chair Umberg's letter to the joint legislative audit committee indicated that this body would take those recommendations seriously, that we could. Some of them relating to federal funding are a little hard to get our

arms around but certainly to operations. So this is -this is a worthy followup to that commitment that Chair
Umberg made.

Other comments from members?

2.1

2.4

MR. UMBERG: Just to move the issue.

MS. SCHENK: Yeah. Just a comment. I have been advocating this for three or four years for various reasons and analogizing to the private sector, publicly held companies always have independent audit committees and the importance of them. And while we're not a non-shareholder driven, we certainly have an extraordinary fiduciary responsibilities, and I'm very pleased to see that we're finally going in that direction. So thank you for that.

CHAIRMAN Richard: Thank you. I should also point out that it will be my intention to ask Mr. Rossi to serve as chair of this committee for two important reasons. The first one is his deep background in financial matters at the Bank of America, including audit. And the second more important reason is that he's not in the room right at this moment.

Is there a motion?

MR. UMBERG: Move.

MR. BURNS: Second.

CHAIRMAN RICHARD: Okay. It's been moved by

-CALIFORNIA REPORTING, LLC (415) 457-4417-

```
Director Umberg and seconded Director Burns.
1
2
           Madame Secretary, please call the roll.
3
                MS. TOOF: Mr. Umberg.
 4
                MR. UMBERG:
                             Aye.
5
                MS. TOOF: Mr. Richards.
                MR. RICHARDS:
6
                                Aye.
7
                MS. TOOF: Ms. Schenk.
8
                MS. SCHENK: Aye.
9
                MS. TOOF: Mr. Burns.
                MR. BURNS: Aye.
10
11
                MS. TOOF: Mr. Hartnett.
12
                MR. HARTNETT:
                                Aye.
                MS. TOOF: Chairman Richard.
13
14
                CHAIRMAN RICHARD: Yes.
15
                MS. TOOF: Thank you.
16
                CHAIRMAN RICHARD: Okay. Next is Item 5
17
    Supplemental Alternatives Analysis Report for
18
    Bakersfield to Palmdale.
19
                MR. MCLOUGHLIN: Good morning, Mr. Chairman
20
    and members of the board. Mark McLoughlin with
2.1
    High-Speed Rail.
22
           I'd like to introduce this item today, we'd like
23
    to provide you with an update of the Supplemental
24
    Alternatives Analysis Report and also provide staff
25
    recommendations for the Bakersfield to Palmdale section.
```

-CALIFORNIA REPORTING, LLC (415) 457-4417-

Today we -- in the update, we will include any changes in alignments and station alternatives, and we will reduce the number of the alternatives discussed previously in the primarily alternatives analysis as well as refine profiles and those carried forward.

2.1

As you may recall, this item was before the board in September of 2010 with the adoption of the preliminary alternatives analysis recommendation for this section. Upon your affirmative board action today, the Bakersfield to Palmdale team is ready to progress with the 15 percent design and the draft EIR/EIS document.

I'd like now to introduce Mark Wiseman of the Bakersfield to Palmdale team of EIS. He's the plant —team planning manager, and he'll provide you with the presentation. Any technical questions, please refer to Mr. Wiseman.

CHAIRMAN RICHARD: Thank you. Good morning.

MR. WISEMAN: Thank you. I'm Mark Wiseman.

As Mark said, I work with the US Corporation in San

Francisco. I'm the planning manager for the

Bakersfield, Palmdale study.

The purpose of coming to you today is to both give you an update of the alternatives analysis planning work that's coming to date and provide you, hopefully,

the rationale for the recommendations before you.

2.1

I know some of you are new on the board, and it's probably good to give you a little bit of history. What we're doing here, this section itself, that we're looking at between Bakersfield and Palmdale section, is 88 miles long. In our planning work, we have been focusing primarily on these sections that are colored on the left. Edison is in pink. Edison is the flat, agricultural area east of Bakersfield. The green area, Tehachapi, is the mountainous area in between. And then through the Mojave down to Palmdale is Antelope Valley.

Just some background, we are following the corridor that was identified as preferred alternative in the programmatic document EIR/EIS in 2004, 2005. The corridor follows the major transportation corridor in the this area. It's on 58, the UP railroad, and SR14 to get from Bakersfield to Palmdale.

The topography that, as I eluded to, is quite varied in this area. From the City of Bakersfield, we're at 500 feet above sea level, and we climb rapidly to 4,000 fee atop of the Tehachapi Pass in the City of Tehachapi and then come down to the Mojave into the Community of Roseland and the City of the Palmdale. So there's a great variety of topography here we have to encounter in terms of our engineer work that we have

here in the valley.

2.1

After we -- when we started our alternative analysis, we looked at many different options for getting through the mountain in particular. Like the people in the LA, Palmdale team we used quantum software to help us provide some insight into cost effective, environmentally sensitive and routes that could get through here in a way that serves the purpose and need of getting through quickly.

Quickly on, we understood that the blue alignments that you have here, which follow the programmatic alignment were preferable. They were much more inline with the purpose and need and travel time. And they were much more environmentally sensitive, because they were long-existing corridors and were not in areas that were rugged without access.

We used the evaluation criteria that the authority has used in all its alternatives analyses to weed out the alternatives that were in that previous illustration. We primarily came up with two alternative alignments. Horizontally, through Edison, Tehachapi, and the Antelope Valley, and brought those to you in September 2010, As Mark has previously said. The alternatives analysis report was approved by you at that point.

Since that time, we have had time to take a breather, to look back at what we were doing, and try to figure out how we can refine some of these alignments, respond to what we were hearing from the stakeholders in the community. We've gone out and done several dozen stakeholder meetings since then. We were focused to try to address those issues, to reduce environmental impacts wherever possible, and also to contain costs.

2.1

So in this area, what we're doing to contain costs is three items that we looked at, trying to lower profiles from Alameda to at-grade, reduce viaduct tunnel in length in and Tehachapi area, and if possible, find a shorter alignments at -- between Bakersfield and Palmdale at least a little bit.

So the engineers went back out and went to stakeholder meetings, and we started to discussing how we could do this in the three different areas described. You see here on the left, we tried the lower profiles from Alameda to at-grade. On the Tehachapi area, we actually created a whole new alternative in red that has a steeper gradient based on some design variance from the Grapevine study that we employed here as well, and we did find a little bit of a shorter alignment to be in a more direct route between Tehachapi and Roseland, as you see.

Now, specifically, I want to go through a little bit more detail so you understand exactly what we encountered here in doing some of the these adjustments according to our objectives. In the Edison area, we basically accepted the horizontal alignments that were established in previous preliminary AA work as justified. We kept the same routes. We tried here where the solid line is to take elevated alignments, which primarily were primarily throughout the whole subsection here and put them to grade. We came through with a couple of issues that we encountered had in doing that.

2.1

The white circle in the center of the illustration shows you the community of Edison. It's a EJ community, and we have to -- by going to grade, we sever some of the major north/south arterials, which provide a lot of truck access to agricultural interests in this area. In fact, there are four major agricultural packing and shipping plants that line Edison highway. And our alignment, if at-grade, would cut access to those businesses.

So we need to deal with that in the future and our 15 percent design and go back to the stakeholders and try to work out a solution to that. Probably, we will incorporate more of combination between elevated

and at-grade alignment.

2.1

On the right-hand side of the illustration, here, we go back up in the air, elevated across a major flood plain called Caliente Wash. Just wanted to give you an idea of what that could possibly look like. It's going to be one of the few high, long viaducts that we have. This is from France, one of the TGA Alignments.

Obviously, we're trying to minimize this, because these are expensive structures. And I think we have in a lot of ways when you cross into the mountainous areas.

Other issues we're looking at here are issues of land use. You see in the upper left-hand corner, Tejon Ranch extends all the way over from Grapevine to our corridor on Highway 58. Tejon Ranch is part of a development agreement with the county that has initiated and formalized conservation easements shown here in yellow. The Tejon Ranch Conservation Trust has been established to maintain that. Their major concern is that — not only keeping that area as prestain as possible and developed but also to maintain wildlife circulation as it is one of the main animal — wildlife corridors in the southwest.

Further down to the southeast, Loop Ranch,

Cummings Ranch are other two major private property

owners in the area. Loop Ranch is an extensive cattle

operation, and our alignments go right by the facilities of the ranch operation the corrals, feed lots, et cetera. We would be sensitive to having a profile that really can keep that operation going.

2.1

Next is the Cesar Chavez Center. The Cesar

Chavez Foundation has redeveloped some historic

properties in that area, and they're gorgeous, and they

conduct educational classes and also have a memorial to

Cesar Chavez there. We're within viewshed, although not

adjacent to the center itself, we're trying to be

sensitive to their environment.

The purple lines that you see on the map are the fault lines that are -- we have to account for on the grade as we're coming through here. So many challenges to work on engineering-wise.

And I wanted to focus on the alignments in blue, yellow, and red, because The next slide I'm going to show you what happens to different gradients through the mountainous areas.

In the upper right-hand corner, you can see the gradients of the original two alignments. The blue and the yellow are 2.5 to 2.75 gradients over a distance of 12 to 20 miles. The design variance that we used for the new T3 alignment is in red has a 3.3 percent gradient over 8 miles. It gives us much more

flexibility to be able to hug the contours in a way that presents us from doing the high, long viaducts that you see with the blue alignment.

2.1

The red alignment, here, also will save us time and money in getting up through the mountain areas, and as you can see, the more you make the grade shallower, the higher the alignments get.

The other advantage to the new T3 is that not only does it cut time, a minute off of the overall travel time between San Francisco and LA, but provides a shorter route. It also avoids certain impacts that we found that would be produced by preliminary AA alternatives shown in blue and yellow.

The first circle on the left is the place where we'd be elevated, because you cross Oak Creek Road and the UP Spur. It is at the same point that L.A. DWP has major transmission lines coming from Oregon, and they would have to be elevated into the Mojave air space, which Mojave airport certainly does not want us to do.

In addition, the colored areas around the map, here, that you see are potential wind farms that are being permitted right now. All of our alignments would have to go through some of them to place wind turbines. As you can see at the top portion of this graphic, there are many more areas of wind turbines, and also the

yellow area in the second circle is where there are two solo projects that we completely displace that if we chose that alignment. In addition, there are impacts to mining operations along SF14 and the interchange itself. And for those reasons, we feel that new T3, the new alignment, is much preferable to the old ones.

2.1

Similarly, in the Antelope Valley, we're coming down through the same alignments horizontally that were in primarily AA. The blue alignment is bordering the UP all the way through whereas the gold alignment is on the west side of the sierra alignment and completely avoids the UP right-of-way.

Most on this right-of-way was at-grade through the primarily AA, but in the community of Roseland and the City of Lancaster, it was elevated. We tried to figure out if coming to grade would be beneficial.

There are issues with the City of Lancaster and the community of Roseland in terms of severing east/west major arterials. We'd have to deal with grade separations that are problematic in some ways for land use and displacement issues. The City of Lancaster has a major commercial for streets that were designed recently. That would be severed by this alignments, both of them, and we'd have to figure out a way to grade separate if we did this particular alignment.

So in conclusion, I just wanted to show you where we are on the process to get from planning to finalizing the environmental record of decision. We have many steps to go through with the next year or so and -- but that's where we are on the process right now. If you approve the recommendation before us, we'll move right into 15 percent design and draft EIR/EIS.

2.1

So what's before you are these recommendations:

In the Edison area, carry forward preliminary AAE2B,
which is elevated, one of the original alternatives, and
add the E2 at-grade and determine, intermix with the
optimal profiles.

Second, carry forward preliminary AAE4 elevated and the new E4 primarily at-grade and decide which profiles would be optimal through those areas, and particularly in the town of Edison. Withdraw preliminary AAE2A, which was a hybrid that didn't work very well.

Through the Tehachapis, carry forward the new T3 in red and also the preliminary AAT31 in yellow.

Refine -- normally the blue alignment being -- having so many viaducts long and high would be the withdrawn.

We decided to take a chance with that. Refine it and try to -- using the same criteria we used for the new the new T3, in terms of gradient and see, because it has

a slightly different alignment through the Tejon Ranch areas, as you see in the upper left-hand corner, whether there are environmental tradeoffs that would make that alignment a better alignment to follow than the red.

2.1

We withdraw preliminary AAT3B and T32B, which had a slightly different profile through this area, mainly because we have been allowed to increase the gradient here.

In the Mojave area, which you see in the lower right-hand corner, we carry forward new T3 in the red and withdraw the original preliminary AAT31 and T32 in the yellow and blue lines, because of all the advantages I talked about and avoiding the impacts that those two alternatives created.

With the Antelope Valley, finally, carry forward the primarily elevated and at-grade alternative both at the blue and gold line. Try to find out the optimal profile for those, both of those, alternatives working with the City of Lancaster and Community of Roseland and then also try to investigate shared use of UP for AA2V4, which borders it.

So with that, if you have questions, we can entertain them.

CHAIRMAN RICHARD: Questions from members? First, Mr. Van Ark.

MR. VAN ARK: Mr. Chairman, I just want to make you aware of this a recommendation from staff for your approval today. The summary of the same recommendations can be found on page six of the board papers. So if you want to revise them or look at them.

CHAIRMAN RICHARD: Okay. And could you just clarify, at least for my edification, I had mentioned to Mr. Van Ark, that I managed to leave my binder somewhere else. But are there -- so it's all of these recommendations, or are we looking at alternatives in each of these alignments here?

MR. VAN ARK: There are alternatives in all of these alignments. So what you're seeing is that some recommendations are adding alternatives to them or withdrawing some, but the intent is always to try and retain alternatives and to optimize the system as we move forward.

CHAIRMAN RICHARD: All right. Before we go on, although the public comment period is closed, we do have one speaker who wishes to speak on this matter, and I think we'll allow him to do that.

Mr. Tolmach.

2.1

MR. TOLMACH: Thank you, Mr. Chairman
Richard and board. I just wanted to ask three questions
on the alignment, specifically over the Tehachapi

portion.

2.1

2.4

The 1952 the Kern County Earthquake destroyed eight miles of track near the White Wolf Fault. I noticed you rejected all the quantum alignments, which would have avoided the White Wolf Fault. Why are you so sure that another earthquake won't destroy a similar extent of track on the high-speed rail? That was the biggest earthquake in southern California in the last century. So it is, I think, a significant hazard to that route.

The second question is, what is an example of an existing high-speed rail line which has a ruling grade of 2.5 percent or higher over 20 miles? I know Tony Daniels was quite outspoken on how far out this was for high-speed rail. This is the extreme case. I'm just curious if anybody knows of a similar case where a similar line with similar gradient has been designed.

The third question is, I'm very glad you found some mile savings on this longer route. I'm wondering is there a current mileage, official mileage, for Palmdale and an official mileage with the new alternative, new T3?

CHAIRMAN RICHARD: Thank you, Mr. Tolmach.

Questions from members? Ms. Schenk.

MS. SCHENK: Thank you, Mr. Chairman. The

-CALIFORNIA REPORTING, LLC (415) 457-4417-

speaker has brought up a question that I wanted to inquire about, and that is if we can have a bit of an extended discussion on the earthquake aspects of it as it's something that we've been asking over and over again, and obviously, everyone is concerned about that.

2.1

MR. WISEMAN: Right. I refer to Mr. Van Ark for that one.

MR. VAN ARK: We have -- I mean just as a general statement and if the board would like, I think we could get people in to give you a talk particularly on that, but there are parameters that the authority lays down, engineering parameters, as to how to approach earthquakes and how to do the designs. And one of them, particularly being, at how an earthquake fault should be approached, preferably, at-grade. Because that means if there should be an earthquake -- there's always a probability, and we work on the probability of earthquakes. There is always the probability of an earthquake. But certain faults have less -- lower probabilities than other faults do. The statistics and data is available as well.

Also the amount of a move, a probable move, out of an earthquake is generally very researched and known, but we're trying to approach an earthquake at-grade for the reason that if an earthquake should occur, the

repair for such an earthquake can be done soon.

2.1

An earthquake can be accommodated inside a tunnel, but then you have to, basically, design that tunnel to accommodate a possible movement of that track so that you can make that repair at the time.

Now, what most people are concerned about is what happens in an earthquake when the trains are operating, but you also heard a lot from, for instance, the Japanese. They're not the only ones who have monitoring and sensing equipment, but, you know, any country -- and we will have that in California as well -- that does have earthquake, the likelihood of an earthquake, they're sensing, which we will have in our project as well, will be done. And as soon as you get to specific types of earthquake's movements or monitoring, you shut down the system immediately, and you evacuate the people.

So that is accommodated completely separately from the design that you have to do to minimize the impact, but you do understand that between northern and southern California, we'll have two tracks. And if there is an earthquake and if that earthquake does move one of these tracks, one thing we are certain about, you want to be able to do that repair as soon as possible.

Again, I think we are very fortunate in our

business that we do have colleagues, for instances, and associations with people like the Japanese who do help us with the seismic design criteria but also informing us on the seismic monitoring systems that we would be incorporating in our system as well.

2.1

MS. SCHENK: May I follow up just for informational purposes. Is Dean Frieder Seible involved at all in the design? He's the Dean of the Jacobs School of Engineering at UCSD and is the, I believe, the Chair of Caltrans Seismic Safety Committee and is advisor to China, Japan, and other countries and has expressed, you know --

MR. VAN ARK: There are a few ways in which he or his groups are involved. One is he's on the peer review group. So the peer review panel of the California High-Speed Rail. So -- but obviously, his role there is more on the executive item of seismic advice or information. But we also have presented, just some months ago to the Californian -- to the California at Caltrans High-Speed Rail -- sorry. The Caltrans Seismic Advisory Board. So our engineers reported to them, and we had a session with them on what we are doing, how we are doing it, and we got their commentary as well on, you know, recommendations from their side. And Professor Seible was at that particular meeting. I

```
was there as well.
1
2
                CHAIRMAN RICHARD: Yes, Mr. Umberg.
3
                MR. UMBERG: Thank you. If we can go back
4
    to the slide where it depicts the steps. I think it was
    about three --
5
                MR. WISEMAN: You mean the incline?
6
7
                MR. UMBERG: No. It was the --
                MR. VAN ARK: The timeline.
8
9
                MR. UMBERG: The timeline, exactly.
10
                MR. WISEMAN: The timeline. Okay. This
11
    one.
12
                MR. UMBERG: Can you give -- and I realize
13
    the dates aren't certain yet -- but just some idea of
14
    what the dates look like?
15
                MR. WISEMAN: I think it's still a process,
16
    but from what I understand, the record of decision, the
    very end, will be done at the end of 2013. That's the
17
18
    goal.
19
                MR. UMBERG: Okay. All right. That answers
20
    my question.
2.1
                MR. VAN ARK: That's two years period of
22
    time.
23
                CHAIRMAN RICHARD: Mr. Richards.
24
                MR. RICHARDS: Thank you, Mr. Chairman.
25
           Can you just generally summarize the public
```

-CALIFORNIA REPORTING, LLC (415) 457-4417-

comments and to the extent you are able to do so, how they have been or will be integrated in moving this supplemental alternatives analysis along.

2.1

MR. WISEMAN: I think this is really one of our strong points. We have met with at least two dozen stakeholders in this area throughout -- from Edison all the way down to Palmdale over the course of the whole Supplemental AA multiple times bringing, plans, profiles, role maps to -- showing them what we're proposing, what was there before, and trying to get their feedback, so we can inform the engineers about what issues to consider. The process has been ongoing throughout the whole last two years. And I feel very good about that interaction.

I think we've gotten some very good, strong and favorable comments. Some of them critical, which we have addressed, and some of the favorable about what we can do with 15 percent design.

MR. VAN ARK: Member Richards, it sounds not that much as compared to the peninsula or something when you say a "few dozen," but clearly, as you saw from the drawings there, there are three major land owners in this area, and meetings have been held with them. They have been very interactive. Certainly, not as many stakeholders in a section like this compared to others

where we go through in the cities. But yes, a lot of interaction has taken place with stakeholders.

2.1

MR. WISEMAN: And as soon as this is approved, we're going back out with refinements, because obviously, we've got issues to deal with in terms of profiles with communities. All of those communities are going to be consulted, and they will be part of the process to get the optimal profiles. We can't do it without them.

MR. RICHARDS: Thank you.

CHAIRMAN RICHARD: And just to follow up on Board Member Richard's question, obviously, we didn't have people who were concerned enough to come to the board today, but do we have written comments or other things on this matter that have come in that will give us some sense of whether concerns were raised about any of these particular alternatives from counsel or Ms. Toof.

MR. VAN ARK: I have no knowledge of written comments about it, Mr. Chairman. I do have knowledge that we got -- we got confirmation back from Palmdale as an example that they were very anxious for us to continue on this basis. So they -- you know, we checked with them as well. Obviously, because it is soon after the decision to withdraw the Grapevine, but

they were very anxious for us to continue fast.

2.1

I would also like to say that you do understand the details of Bakersfield is actually done by the Bakersfield to Fresno team. So therefore, you do not hear a lot of the details. You know, how the environmental process works, it goes from city to city, but one of the teams is responsible for the actual cities. So the details of, of Bakersfield is actually the other team, but I will make mention of that in my CEO's report. We've had meetings with Bakersfield as well, which will be very constructive. So -- but it's not necessarily a list that we have given you feedback on that one.

CHAIRMAN RICHARD: All right. Other questions?

MR. VAN ARK: And sorry. If I may also say so, Mr. Chairman, you may well recall from the last board meeting, the lady representing Tejon Ranch wanted to make it very clear to us, because they were a little concerned that they were seen to be as not supporting the project as such, and she, if you could recall, made clear reference to the fact that we go through Tejon Ranch here. And they have been constructive with us, with the Tejon Ranch, you know, the interaction with the High-Speed Rail group. So, you know, that also is a

```
positive statement in the last board meeting.
1
2
                CHAIRMAN RICHARD: I do recall that.
                                                       Thank
3
    you.
           Board Member Richards.
 4
5
                MR. RICHARDS: Yes, Mr. Chairman.
6
    reasonably familiar with the area that we're discussing.
7
    I have driven as closely as you can, to the right-of-way
    that is being proposed. I'm supportive of staff's
8
    recommendation for moving forward on the appropriate
10
    alignments.
11
                CHAIRMAN RICHARD: All right. Other
12
    questions or comments?
           Do you want to make that in the form of a motion?
13
14
                MR. RICHARDS: Yes, Mr. Chairman.
15
    you. Or did you want to?
16
                MS. SCHENK: I'll second.
17
                CHAIRMAN RICHARD: All right. Motion was
18
    made by vice-chair Richards, and it was seconded by
19
    vice-chair Schenk.
20
           Secretary, please call the roll.
2.1
                MS. TOOF: Mr. Richards.
22
                MR. RICHARDS:
                               Yes.
23
                MS. TOOF: Ms. Schenk.
2.4
                MS. SCHENK: Yes.
25
                MS. TOOF: Mr. Burns.
```

-CALIFORNIA REPORTING, LLC (415) 457-4417-

```
MR. BURNS: Yes.
1
2
                MS. TOOF: Mr. Umberg.
3
           Mr. Rossi.
                MR. ROSSI: Yes.
 4
5
                MS. TOOF: Mr. Hartnett.
                MR. HARTNETT: Yes.
6
7
                MS. TOOF: Chairman Richard.
                CHAIRMAN RICHARD: Yes.
8
9
           Okay. Thank you. Thank you for your work on
10
    that.
11
           I was informed by Mr. Van Ark and unfortunately,
12
    I knew this also directly, but Lance Simmens' father
    suffered a stroke, and he is with him at this point in
13
14
    Pennsylvania. We'll keep him in our thoughts and
    prayers, but because of that, Item 6, I think, we will
15
    put over.
16
17
           Members' Report, anything that members would like
18
    to report at this time?
19
           Okay. Chief Executive Officer's Report, Mr. Van
20
    Ark.
2.1
                MR. VAN ARK: Mr. Chairman, members, I
    decided to stand here again today, because I do have a
22
23
    few comments. It's a little bit longer comments I'm
24
    going to make to you. So it's easier to address you
```

-CALIFORNIA REPORTING, LLC (415) 457-4417-

25

from this podium.

First thing, the status of the RFQ for the construction of the initial construction section. The RFQ, as you know, for package one, package number one, as we refer to it, has been concluded and companies have been shortlisted or groups, consortiums have been shortlisted. I do not necessarily want to go into the details of this now. The information is available on our website for anybody who wants to see it. Because as soon as you get into consortiums, I don't want to have a misinterpretation of the companies' names.

2.1

We are very happy with what we received and what we were able to shortlist, and the information is available. The companies have been advised. They are aware of their selection and that they made the grade on the shortlist.

We're now moving to the RFP, Request For

Proposal, for the construction of this first package

with initial construction section. The draft invitation

to do scope of work and general and special terms and

conditions will be provided to the shortlisted companies

in the form of a term sheet and for their review.

The shortlisted firms will then be asked to comment, because clearly, we are interested in their comments if there should be something in there that will really, you know, make them want to withdraw. They have

been informed by us of the general condition before, but, you know, we think that they should have the right just to look at them again. This is a process of about two weeks beginning this next week, and we will interface with them, and get their inputs.

2.1

The term sheet, including these main points, the RFP, as well as the recommendation on a stipend payment to the non-successful bidders, will be put forward to the March boarding meeting to yourselves in March for you to consider and to vote on, and then we need to go to the Public Works Board with the same conditions, because we are subject to Public Works Board approval on March 8. So at the same time, recommendations after you see them, would go to the Public Works Board.

The Bay Area to Central Valley partially revised program EIR documents. I mentioned in my last report to you that the revised programmatic Bay Area to Central Valley EIR/EIS documents were released for a 45-day comment period on January the 6th, and the closing of this is on February the 21st. Okay. The documents are available on our website.

We will host a public hearing in San Jose between 4:00 o'clock and 7:00 p.m. in San Jose City Hall in the City Council Chambers in 200 East Santa Clara Street, San Jose on February the 9th, and there will be a board

member there as well as authority staff, and we will hear public comment from whoever wants to participate there.

2.1

We also will have a court reporter there to transcribe the comments, because this is part of the process so that we make sure that we have the right interpretation of all the comments made.

So the Bureau of State Audits completed and issued its follow-up audit. It's the follow-up audit of an audit they did in April 2010. This is available on their website. The authority would like to thank the BSA for the work they have completed.

And as you heard earlier on, I think the Chair referred to it, the authority will work diligently to implement whatever is possible of the recommendations made. We, however, had written a letter. The authority had respectfully pointed out that there were certain areas of disagreement concerning points made in the audit report and maybe there are two categories I would just like to refer to. The Chair referred to one already and that is that high-speed rail believes that the comments in the draft business plan, which lead to one of their main conclusions, and that is that high-speed rail planning situation has become increasingly risky, as they call it, is purely

speculative and should not, in our opinion, form part of the audit report.

2.1

The second point is regarding mainly issues of project reporting. High-Speed rail believes that BSA has not really understood the role of the Project Management Team, PMT as we refer to them, on this project. Those PMT, who are program managers and we work together with them on a day-to-day basis, and they work on behalf of the authority. Therefore, during the planning of the environmental phase of this program, it's obvious and necessary that the PMT manage and challenges the regional consultants' reports, and their input on a monthly basis.

It is different when you start talking about a construction project, where there are very strict schedules that they have to meet. Our schedules are more flexible, because we're in this environment phase, and therefore, you need to manage it on a month-to-month basis. We will be making, the authority will be making, a report to the board on a periodic basis so the board is updated on these issues of the audit and as the audit recommendations occurs.

On a new item, federal funding opportunity, the US Department of Transportation has just released a NOFA, as we refer to them, a Notice of Funding

Availability, for another half a billion dollars in grant funding for infrastructure investment. It's called TIGER. TIGER Discretionary Grant Program. This will be their fourth cycle of TIGER grants. And of this, up to 200 million is available for high-speed and intercity transportation projects. We are working at this stage — this has just been granted. We need to apply. These things always happen very fast. We need to apply by February the 20th, and we will be working together with northern and southern Californian authorities with the aim to try and find, as we had recommended in our business plan, some opportunities for early investments, whereas such TIGER loans could really be good to be able to do smaller projects in northern and southern California.

2.1

Next point is the agricultural working group.

Just if people understand, this group is very active.

The agricultural working group, being guided by Jeff

Abercrombie in the Central Valley, has met, for

instance, on January the 13th, January the 27th, and

will again meet on February the 6th. We should have a

web page up for them next week in our website with the

documents that we will be collecting for agricultural

working group.

The idea is to post white papers on there. I

mentioned once before to you, but we have been just reading and finishing off the first of such white papers down there. They're not authority people. They're people of the industry, the local government out of the valley.

2.1

The first one is on pesticide regulations, something that is of concern to the farmers in the Central Valley, and that should be available within a week or so. The next one we're looking at is on the impacts of high-speed rail on dairy operators.

So the activity is really accelerating, and I think it's going bring good results to the people of the Central Valley.

On the Merced, Fresno project EIR/EIS, you know that you had made a determination of the preferred alternative there, and staff and consultants are working hard to respond to the various comments that we have received and to prepare the final EIR/EIS documents.

And the target date, as I would like to make everybody aware of, is for the May, the early May board meeting, to bring the final document to the board.

We are continuing discussions with quite a lot of the stakeholders, and here, I also thank Member Richards, who obviously is in that region, but, you know, we've had meetings with, for instance, Chowchilla.

We have had meetings with Merced. We had meetings in Fresno, the Madera Farm Bureau. And as these meetings continue, we have our own meetings, again, next week, to ensure that as we move toward the final -- what's in the final, incorporates the right understanding. It has to be within the parameters you set in your decision, but clearly, there's more detail that goes into it based on the input that we received.

2.1

Also of importance to the people of the area, appraisers will begin meeting with the affected property owners in the City of Fresno sometime, maybe later this month, early next month. And there are some activities going on in the area, in the earliest section, which is in Fresno itself, to have more meetings with the people, with the locals, to inform them of the processes and how this activity will continue.

For the Fresno, Bakersfield EIR/EIS, we are working on preparing the revised draft EIR or supplemental EIS, as it's called, for Fresno to Bakersfield. We know that we are putting in further alternatives, which we have brought to the board, and we should be issuing those documents later this spring.

Also, continuing discussions are taking place with stakeholders. I mentioned to you, some meetings have taken place with Bakersfield. We believe that

those meetings are very successful, with the water districts. So we continue to speak to the people in the area.

2.1

Now, I'd like to speak a bit about small business, disadvantaged business issues. Ms. LaCome already indicated this today in her public comment. You know as well that the authority received a letter on September the 15th from the FRA of last year and -- that contained their final decision with respect to a complaint filed against the authority by the Associated Professional and Contractors on December the 8th, 2010. So there is various activities that have led out of that letter from the FRA. I'd like to just touch on the few on the executive summary of Title 6 Plan.

So the letter required that the authority submit a Title 6 plan as required by the Title 6 of the Civil Rights Act of 1964. The authority has prepared a draft Title 6 policy on the policy and plans that's under internal review. The policy and plan will be presented to the board at the April 2012 board meetings for approval and adoption. So we will be moving forward on that item also talking to the industry about it.

The second is, this is what Ms. LaCome mentioned, there was a request of the FRA to require action pertaining to the establishment of the Business Advisory

Council. So the intent of the Business Advisory Council is to provide a forum to facilitate the participation of small, disadvantaged, disabled veteran businesses as well as micro businesses and non-small business representation via construction professional services, business trade members, associated to provide commentary and insight in the authority policies and practices and effect or impact small business utilization, participation of High-Speed Rail Authority project on its contracts.

2.1

businesses, trade organizations. We would look for 20 members. 34 have responded with interest letters, and we are now obtaining further data from them. We will then meet the propose 20 final organizations. They will be presented to the board, again, in April. So in April, you'll have quite a big small business DBE presentation to you for approval and adoption of this particular council. So we will come to you requesting that you approve the formation of this Business Advisory Council in April.

Then we have the third item, similar direction, and that is the SBE, DBE, public program plan, public facilitation. On November the 3rd, the board -- of 2011 -- the board approved the draft Small Business,

Disadvantaged Business Enterprise program for release for public facilitation to receive commentary and feedback. On December the 13th, the board approved the authority's request to extend public comment to January the 16th -- so -- of 2012 in consideration of the holiday season that was upcoming at the time.

2.1

So now what have we done. On the public facilitation side, electronic notification, the authority developed a database of over 21,000 stakeholders to distribute the information pertinent to the authority's draft SBE, DBE program and the public comment period. Ten electronic notifications were distributed from November the 15th to January the 30th, 2012. So from 2000 to 2012. Over 162,270 emails were sent.

On the public notices side, public notices were advertised in 21 diverse notifications to notify the public that the authority was in the process of soliciting comments. We had listening sessions on December the 1st, 2011 in San Francisco; December the 13th, 2011 in Merced, California; and then on January the 12, together with our board meeting there in Los Angeles, we had a parallel running session, listening session. We also participated at the Senate select committee on procurement. It was informational hearing

and -- organized, hosed by Senator Curren Price on January the 5th, and we were there and participated at that as well.

2.1

We also have a website and the authority encourages individuals in visiting our website to submit any commentary on the draft SBE, DBE programs. We try and be as open as possible to try and get whatever we can to make sure that this program becomes a success for our project.

On a completely different topic, present and new monthly board meeting schedules. You know that you adopted a board meeting schedule in November of last year. I just wanted to advise everybody that there will be an additional board meeting on April the 19th, 2012 to decide on the preferred alignment, Bay Area to Central Valley following the re-issuance of that documentation. So that will take place on April the 19th.

Then I would also just like to advise everybody that the -- what we referred to previously as the May 3rd, Thursday, May the 3rd, board meeting will mostly likely be a two-day meeting or one-and-a-half day meeting, May 2rd, May 3rd, because of the work that needs to be done related to the Merced, Fresno Alignment, which could well take longer and everything

that's on the agenda, to do that. That may be a two-day, one-and-a-half day meeting May 2nd, May 3rd, which is a Wednesday.

2.1

2.4

MS. SCHENK: Where? Where?

MR. VAN ARK: That, I think right now is presently scheduled for Fresno. The one in April is scheduled for Sacramento.

Stationary planning funding agreements. We signed the final funding agreements with Fresno.

Obviously, Fresno is our first location on the first station that we will be building. So we were happy that we could conclude that agreement with them for station area planning, and we issued an NTP for the station area planning for Fresno.

On the business plan side, you already heard that, you know, the period for commentary closed January the 17th. There were a large amount of comments received. Obviously, many of them are duplicative, because that is quite common and quite normal, but the team is working very hard on analyzing them and ensuring that we do the right type of update to the business plan to meet the expectation of as many of the stakeholders as possible.

We are currently also coordinating with many regional rail operators for further analysis and

inclusion of the blended sytem, because clearly there was a very strong positive drive and positive acceptance of the blended system. And so we are doing a lot of work with the regional rail operators to further advance of that work.

2.1

The right-of-way acquisition advanced services. Although it has taken a while, you know that we had requested for -- through the Department of Finance from the legislative \$18 million of funds needed to prepare and to advance services so as to ready ourselves for right-of-way acquisitions in the Central Valley. These funds have now be approved, and this work can now begin in the Central Valley section.

The hiring of a new CEO for the authority to replace myself. The California High-Speed Rail

Authority intends to -- Mr. Tom Fellenz is heading this together with HR to sign a contract with CPS Consulting to perform a survey, which is necessary, as well as to do the CEO search support of the board. The contract must still be approved by DGS, or the Department of General Services, which is expected in the next week.

CPS is a joint powers authority and a party to the MOU with the State of California, which allows the authority to directly contract with them because the terms and conditions are already laid down. CPS has

submitted a proposal for these initial services of \$34,000, which is the contract that we are busy concluding with them at the moment. CPS is doing then the services at the moment. CPS was also, just for the information of the board members who are not around at the moment, was the firm that was also involved in my own search, and they have been in some meetings with Mr. Fellenz and our HR folks to, at least, start the process.

2.1

Unfortunately, the number at the authority currently stands at 29 and a half heads. "Half" is somebody who works part-time. It's not that we do something with the staff. It's a person that part-time. Out of 54 -- sorry. 54 budgeted positions, 29 and a half are full. Unfortunately, the senior management positions, the Chief Program Manager, Financial Officer, Regional Directors in the regions, as well as the risk managers have not yet be filled. And clearly, there is a need that these people in these positions get filled soon, because as the project accelerates, these jobs are really necessary. These people are really necessary.

Mr. Chairman and members, that's my report for today. I'm ready to answer any questions if there are any.

CHAIRMAN RICHARD: Any questions from members for Mr. Van Ark?

2.1

2.4

Thank you very much for that comprehensive report. We appreciate that.

At this time, the board will enter into closed session under the various state statutes that allows us to that to consider matters of personnel, but before we leave -- I'm sorry. Vice-Chair Schenk?

Yeah. We will have a five-minute break.

Before we leave, I would like to do one thing.

We'll be adjourning after the closed session. There's a tradition that we had when I was on the BART Board that I always thought was good, and that was on occasion, we would adjourn the meeting in the memory of someone from our community who had passed on, who was a good civic leader.

And so I'd like to suggest today that we adjourn our meeting today in memory of Walter Johnson, who died recently. He was the head of the San Francisco Central Labor Council, Head of the Steel Workers Union and a real fixture in the labor movement in California, and in his community country. He was a very eloquent and decent man, and I had occasion to work with him, and he was a great laborer and civic leader in our state.

So without objection, if the minutes could show

```
that we adjourned in his memory, I'd appreciate that.
1
           Okay. We'll take a five-minute break. We'll
2
    enter into closed session. Thank you all, and have a
3
 4
    good day.
5
        (Whereupon the proceedings concluded at 12:21 p.m.)
